

DRAINLINER MAKES IT EASY

BEFORE

No digging or damaged landscaping

Complete repairs in hours, not days

Stops pipe corrosion instantly

Protects pipes from tree root damage

Restores pipe flow, even better than new

AFTER

**DON'T DIG UP YOUR YARD!  
INSIST ON THE DRAINLINER  
SYSTEM FOR LASTING,  
QUALITY SEWAGE REPAIRS.**

DrainLiner's exclusive technology has been proven worldwide, and conforms to all industry standards, including NSF-14 and ASTM F1216. It's the only system capable of delivering high quality repairs in less than half the time of conventional methods, all without digging trenches or otherwise damaging your landscaping. When your pipes need repair, rely on DrainLiner - the home improvement investment you can't afford not to make!

## FIND OUT WHAT MAKES THE DRAINLINER SYSTEM BETTER

Repairing broken pipes can be expensive, tedious and disruptive. It used to take days to get the job done – leaving you with no water, your lawn and landscaping in tatters, and your wallet empty. But today, the DrainLiner System by Easy Rooter makes repairs fast and easy, with little or no digging required. The secret is in the exclusive DrainLiner process, utilizing advanced technology developed in Europe and proven around the world.

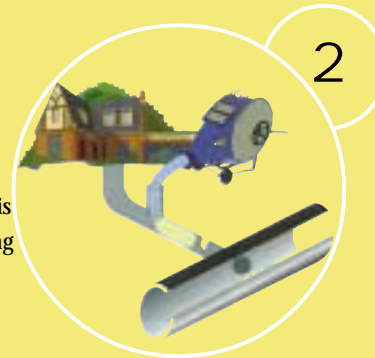

## NO PIPE REPAIR COULD BE EASIER OR MORE COMPLETE

Our manufacturer-trained technicians view your pipes from the inside, using a miniature TV camera, and all blockages and debris are cleaned out.

Then the DrainLiner felt tube, saturated in a special epoxy resin, is inverted into your pipes with compressed air. The air pressure forms the liner directly to the pipe walls, where it cures completely within hours. Once cured, you benefit from a brand new pipe within a pipe.

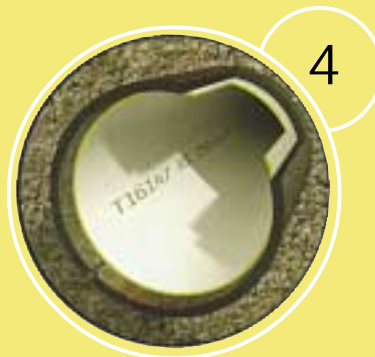

1  
No digging or damaged landscaping! Pipes can be accessed and repaired via one access point.

2  
Blockages and debris are removed, and the specially treated DrainLiner felt tube is inverted into your pipes using compressed air.

3  
Once cured, the tube hardens and becomes a pipe within a pipe.

4  
Erosion is stopped in its tracks and your repaired line stays resistant to root intrusion for life of the pipe.

## A PROVEN SOLUTION THAT INCREASES PIPE PERFORMANCE

Not only are DrainLiner repairs faster and easier than any other method, hydraulic tests prove that the DrainLiner System can restore at least 100% of original flow capacity despite the minimal loss in pipe diameter – it can even improve your pipe to better than new! DrainLiner’s ultra-smooth cured finish and single piece construction evens out bends and joints in existing pipelines, so that the relined pipe allows material to flow smoothly over its new, continuous surface.

In addition, the DrainPox epoxy resin binds the liner to the pipe wall, preventing water from getting between the layers. So once your DrainLiner tube is in place, any erosion or corrosion of pipe walls is stopped in its tracks. Better still, field and laboratory tests conclude that tree roots cannot penetrate or attack the DrainPox epoxy resin. Once a pipe has been relined, it can stay free of root intrusion for as long as the life of the pipe. A DrainLiner relined pipe actually performs as reliably, if not better, than a replacement pipe – all this without digging!
